

Final Project Completion Report

Project Name and Number: Pipeline Condition Assessment, #3919

Description: Assessment and classification of the District's piping network for all pipes 12" and above. The information from this assessment considered break history, install date, soil conditions, pipe type, and several other factors to determine which pipelines are more susceptible to failure. The assessment data will be rolled into the Demand, Supply, and Major Conveyance Study which is currently ongoing. The assessment of the District's existing infrastructure will help identify future capital replacement projects.

District Project Manager: Travis Christensen
